

The A to Z of Animals

Amazing Fact

Tiger moths know when bats are hunting them from the noises the bats use for echolocation. Just as the bat is about to attack, the moth makes a series of clicks to jam the bat's sonar system.

Challenge

Write as many different animals or creatures as you can that begin with each letter of the alphabet.

You can have more than one animal for each letter.

Which letter has the most animals you can think of?

Which letter has the least?

You could work with a partner.

You could also try to find out:

- how echolocation works;
- about humans who have learned how to use echolocation;
- about similar battles between predator and prey.
